

Chemical Metallurgical Engineering Volume 17 (Paperback)

Filesize: 6.91 MB

Reviews

This pdf is worth buying. It is actually written in basic words and not confusing. It has been printed in a remarkably basic way in fact it is merely following. I finished reading this publication through which really altered me, affect the way I really believe.

(Dr. Linwood Lehner IV)

CHEMICAL METALLURGICAL ENGINEERING VOLUME 17 (PAPERBACK)

DOWNLOAD

To download **Chemical Metallurgical Engineering Volume 17 (Paperback)** eBook, you should click the link listed below and download the ebook or get access to additional information which are in conjunction with CHEMICAL METALLURGICAL ENGINEERING VOLUME 17 (PAPERBACK) ebook.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 Excerpt: .sulphur and with each other; the heats of formation of arsenides, arsenates, borates, manganates, aluminates, etc., and a large number of others. There is enough data needed to keep a dozen thermochemical laboratories busy for ten years. For temperatures above the ordinary our thermochemical data are not exact. For instance, in distilling zinc, the energy involved is far different than indicated by the equation $\text{ZnO} + \text{C} = \text{Zn} + \text{CO}$ when the figures for solid zinc are used as in this case zinc vapor is formed. Other data badly needed are the specific heats of all substances, the latent heat of fusion, latent heat of vaporization, specific heat in the gaseous state and liquid state. The latent heat of fusion is needed on steel, brass and bronze, and the latent heat of vaporization has been experimentally determined for only 3 metals and 6 metallic compounds. Vapor tension curves are badly needed. We only know the specific heat of brass and bronze from 100 deg. to 0 deg. The metallurgists are looking to the physical chemists for these data and laboratories should look into this field. A paper on Sulphur Dioxide in Metallurgy, by E. R. Weidlein of Mellon Institute, Pittsburgh, Pa., was read by G. C. Stone. The paper described work in an experimental plant at Thompson, Nevada, on the precipitation of leached copper by sulphur dioxide. The process is described in U. S. Patent 1,201,899, Oct. 17, 1916, which was abstracted very fully in...
